

George, South Africa, 20 February 2012

After the recent update from February 2012, this course is reflecting the latest changes and updates to the FSC Standards relating to chain of custody and reclaimed materials.

Several hundred FSC auditors collaborating with many FSC-accredited certification bodies completed the previous version of the AB Training online FSC CoC Lead Auditor course during the last two years. Usually, the online course was followed by a two days' face-to-face course that allowed participants to develop skills relating to the practical application of FSC Standards relating to Chain of Custody. Few auditors took just the online course, and continued their training with their certification body.

Many auditors complemented this course with the AB Training course on the Correct Use of the FSC Trademarks, a course that is presented entirely online, allowing auditors to understand the details relating to FSC Trademark use by certificate holders.
